

WINTER PHD SCHOOL ON *STATISTICAL FIELD THEORIES*

*The Galileo Galilei Institute for Theoretical Physics
Arcetri, Firenze*

February 8-19, 2021

The school will offer postgraduate lectures on topics of low-dimensional quantum field theory, conformal field theory and integrable systems, together with their applications to statistical mechanics and condensed matter systems. Introductory subjects as well as recent advances will be covered.

This year the school can only admit 25 participants in-person. Accommodation in single rooms will be provided for a total price of about 500 euros. Financial support to accommodation expenses may be provided, upon request, to about 20 participants. The lectures will be broadcast for allowing further students to follow on-line: they should also register, specifying "on-line participation" in their application.

The courses can be included in the PhD curricula of Italian Universities and abroad. If necessary, a final exam on the courses can be taken.

Lecturers

A. Altland (*University of Cologne*): "Introduction to the Sachdev-Ye-Kitaev model"

O. Castro-Alvaredo (*City University of London*): "Entanglement in Quantum Field Theory: An Introduction to Branch Point Twist Fields and their Applications"

F. Colomo (*INFN, Florence*): "Limit-shape phenomena in statistical mechanics"

B. Pozsgay (*Budapest Univ. of Tech. and Economics*): "Introduction to the Bethe Ansatz"

A. Trombettoni (*University of Trieste*): "The Lieb-Liniger model and its applications"

Organizers:

P. Calabrese, A. Cappelli, J. Dubail, F. Essler, C. Morais-Smith, A. Trombettoni, J. Viti

Advisory Board:

D. Bernard, F. Colomo, G. Mussardo

Deadline for application: November 15, 2020
